ABOUT

BASIC BOOKS

Imagine it’s 2030. You call a bank to discuss your loan application, but you don’t get to talk to a person. The bank’s AI has spoken: you are denied. At home, feeling stressed, you take pills both invented and prescribed by AI to keep your blood pressure in check. You stream a video starring “actors” generated by machine. And before you turn in, you wonder if collaboration between Big Tech and China means you should choose a new AI provider for your home.

As Martin Ford shows in Rule of the Robots, AI will soon flow through our lives like electricity does today, remaking every sphere of human activity. Yet even as Ford maps out AI’s disquieting future, he shows how we can prepare for it, advocating for policies such as universal basic income and educational reform. It’s crucial that we take his words to heart.

**MARTIN FORD** is a futurist and the author of three books: *Rise of the Robots*, which won the FT Business Book of the Year Award; *The Lights in the Tunnel*; and *Architects of Intelligence*. He is also the founder of a Silicon Valley–based software development firm. Ford lives in Sunnyvale, California.

By early December 1941, war had changed much of the world beyond recognition. Nazi Germany occupied most of the European continent, while in Asia, the Second Sino-Japanese War had turned China into a battleground. But these conflicts were not yet inextricably linked—and the United States remained at peace.

Hitler's American Gamble recounts the five days that upended everything: December 7 to 11. Tracing developments in real time and backed by deep archival research, historians Brendan Simms and Charlie Laderman show how Hitler's intervention was not the foolhardy decision of a man so bloodthirsty that he forgot all strategy, but a calculated risk that can only be understood in a truly global context. This book reveals how December 11, not Pearl Harbor, was the real watershed that created a world war and transformed international history.

BRENDAN SIMMS is a professor in the history of international relations and fellow at Cambridge. He is the author of many books, including Europe and Hitler. He lives in Cambridge, UK.

CHARLIE LADERMAN is a lecturer in international history in the war studies department at King’s College London. He is the author of books on US–UK foreign policy, including Sharing the Burden. He lives in London.
Human history is full of the stories of peasants, subjects, and tribes. Yet the concept of the “citizen” is historically rare—and was among America’s most valued ideals for over two centuries. But without shock treatment, warns historian Victor Davis Hanson, American citizenship as we have known it may soon vanish.

In The Dying Citizen, Hanson outlines the historical forces that led to this crisis. The evisceration of the middle class over the last fifty years has made many Americans dependent on the federal government. Open borders have undermined the idea of allegiance to a particular place. Identity politics have eradicated our collective civic sense of self. And a top-heavy administrative state has endangered personal liberty, along with formal efforts to weaken the Constitution.

As in the revolutionary years of 1848, 1917, and 1968, 2020 ripped away our complacency about the future. But in the aftermath, we as Americans can rebuild and recover what we have lost. The choice is ours.

VICTOR DAVIS HANSON is a senior fellow in military history at the Hoover Institution at Stanford University and a professor emeritus of classics at California State University, Fresno. He is the author of over two dozen books, most recently The Case for Trump. He lives in Selma, California.
To many of us, tropical forests are the domain of movies and novels. These dense, primordial wildernesses are beautiful to picture, but irrelevant to our lives.

Jungle tells a different story. Archaeologist Patrick Roberts argues that tropical forests have shaped nearly every aspect of life on earth. They made the planet habitable, enabled the rise of dinosaurs and mammals, and spread flowering plants around the globe. New evidence also shows that humans evolved in jungles, developing agriculture and infrastructure unlike anything found elsewhere.

Humanity’s fate is tied to the fate of tropical forests, and by understanding how earlier societies managed these habitats, we can learn to live more sustainably and equitably today. Blending cutting-edge research and incisive social commentary, Jungle is a bold new vision of who we are and where we come from.

PATRICK ROBERTS is a W2 research group leader at the Max Planck Institute for the Science of Human History. He is a National Geographic Explorer and has received numerous awards for his research on human evolution, including a €1.5 million European Research Council Starting Grant. He lives in Jena, Germany.
The Ottoman Empire has long been depicted as the Islamic, Asian antithesis of the Christian, European West. But the reality was starkly different: the Ottomans’ multiethnic, multilingual, and multireligious domain reached deep into Europe’s heart. Indeed, the Ottoman rulers saw themselves as the new Romans. Recounting the Ottomans’ remarkable rise from a frontier principality to a world empire, historian Marc David Baer traces their debts to their Turkish, Mongolian, Islamic, and Byzantine heritage. The Ottomans pioneered religious toleration even as they used religious conversion to integrate conquered peoples. But in the nineteenth century, they embraced exclusivity, leading to ethnic cleansing, genocide, and the empire’s demise after the First World War.

The Ottomans vividly reveals the dynasty’s full history and its enduring impact on Europe and the world.

Marc David Baer is professor of Middle Eastern and European history at the London School of Economics and Political Science. He is the author of five books, including Honored by the Glory of Islam: Conversion and Conquest in Ottoman Europe, which won the Albert Hourani Prize. He lives in London.
The history of warfare cannot be fully understood without considering the technology of killing. In *Firepower*, acclaimed historian Paul Lockhart tells the story of the evolution of weaponry and how it transformed not only the conduct of warfare but also the very structure of power in the West, from the Renaissance to the dawn of the atomic era.

Across this period, improvements in firepower shaped the evolving art of war. For centuries, weaponry had remained simple enough that any state could equip a respectable army. That all changed around 1870, when the cost of investing in increasingly complicated technology soon meant that only a handful of great powers could afford to manufacture advanced weaponry, while other countries fell behind. Going beyond the battlefield, *Firepower* ultimately reveals how changes in weapons technology reshaped human history.

**PAUL LOCKHART** is professor of history at Wright State University, where he has taught military and European history for thirty-one years. The author of six books on the role of war in history, including *The Drillmaster of Valley Forge* and *The Whites of Their Eyes*, Lockhart lives in Dayton, Ohio.
A scientist argues that simplicity is the guiding principle of the universe

JOHNJOE McFADDEN
LIFE IS SIMPLE
How Occam’s Razor Set Science Free and Shapes the Universe

Centuries ago, the principle of Occam’s razor changed our world by showing simpler answers to be preferable and more often true. In *Life Is Simple*, scientist Johnjoe McFadden traces centuries of discoveries, taking us from a geocentric cosmos to quantum mechanics and DNA, arguing that simplicity has revealed profound answers to the greatest mysteries. This is no coincidence. From the laws that keep a ball in motion to those that govern evolution, simplicity, he claims, has shaped the universe itself. And in McFadden’s view, the universe and life could only have emerged by embracing maximal simplicity, making the fundamental law of the universe a cosmic form of natural selection that favors survival of the simplest. Recasting both the history of science and our universe’s origins, McFadden transforms our understanding of ourselves and our world.

JOHNJOE McFADDEN is professor of molecular genetics at the University of Surrey, where he studies the genetics of microbes that cause infectious diseases, such as tuberculosis. The author of *Quantum Evolution* and the coauthor of *Life on the Edge*, he lives in London with his wife and son.

In *Hurricane Lizards and Plastic Squid*, biologist Thor Hanson tells the remarkable story of how plants and animals are responding to climate change: adjusting, evolving, and sometimes dying out. Anole lizards grow larger toe pads, to grip more tightly in frequent hurricanes. Warm waters cause the development of Humboldt squid to alter so dramatically that fishermen mistake them for different species. Brown pelicans move north, and long-spined sea urchins south, to find cooler homes. And when coral reefs sicken, they leave no territory worth fighting for, so aggressive butterfly fish transform instantly into pacifists.

A story of hope, resilience, and risk, *Hurricane Lizards and Plastic Squid* is natural history for readers of Bernd Heinrich, Robin Wall Kimmerer, and David Haskell. It is also a reminder of how unpredictable climate change is as it interacts with the messy lattice of life.

**THOR HANSON** is a conservation biologist, Guggenheim fellow, and author of award-winning books including *Buzz*, *Feathers*, *The Impenetrable Forest*, and *The Triumph of Seeds*. He lives with his wife and son on an island in Washington State.
As the sun set slowly on the British Empire, its mansions fell and rose. Ancient families were reduced to demolishing the parts of their stately homes they could no longer afford, dukes and duchesses desperately clung to their ancestral seats, and a new class of homeowners bought their way into country life. A delicious romp, Noble Ambitions pulls us into these crumbling halls of power, leading us through the juiciest bits of postwar aristocratic history—from Mick Jagger dancing at deb balls to the scandals of Princess Margaret. Capturing the spirit of the age, historian Adrian Tinniswood proves that the country house is not only an iconic symbol, but a lens through which to understand the shifting fortunes of the British elite in an era of monumental social change.

ADRIAN TINNISWOOD is senior research fellow in history at the University of Buckingham and the author of many books on British history, including Behind the Throne and the New York Times best-seller The Long Weekend. He was awarded an OBE for services to heritage by the Queen and lives in Bath, England.
Rulers throughout history have used laws to impose order. But laws were not simply instruments of power and social control. They also offered ordinary people a way to express their diverse visions for a better world.

In *The Rule of Laws*, Oxford scholar Fernanda Pirie traces the rise and fall of the sophisticated legal systems underpinning ancient empires and religious traditions, while also showing how common people—tribal assemblies, merchants, farmers—called on laws to define their communities, regulate trade, and build civilizations. Although legal principles originating in Western Europe now seem to dominate the globe, the variety of the world’s laws has long been almost as great as the variety of its societies. What truly unites human beings, Pirie argues, is our very faith that laws can produce justice, combat oppression, and create order from chaos.

Fernanda Pirie is professor of the anthropology of law at the University of Oxford. She is the author of *The Anthropology of Law* and has conducted fieldwork in the mountains of Ladakh and the grasslands of eastern Tibet. She previously spent almost a decade practicing as a barrister at the London bar. She lives in Oxford, UK.
After 9/11, mental health professionals flocked to New York to handle what everyone assumed would be a flood of trauma cases. Oddly, the flood never came.

In *The End of Trauma*, pioneering psychologist George A. Bonanno argues that we failed to predict the psychological response to 9/11 because most of what we understand about trauma is wrong. For starters, it’s not nearly as common as we think. In fact, people are overwhelmingly resilient to adversity. What we often interpret as PTSD are signs of a natural process of learning how to deal with a specific situation. We can cope far more effectively if we understand how this process works. Drawing on four decades of research, Bonanno explains what makes us resilient, why we sometimes aren’t, and how we can better handle traumatic stress.

Hopeful and humane, *The End of Trauma* overturns everything we thought we knew about how people respond to hardship.

**GEORGE A. BONANNO** is professor of psychology and director of the Loss, Trauma, and Emotion Lab at Teachers College, Columbia University, and the author of *The Other Side of Sadness*. He lives in New York.
In the 1860s, Napoleon III, intent on curbing the rise of American imperialism, persuaded a young Austrian archduke and a Belgian princess to leave Europe and become the emperor and empress of Mexico. They and their entourage arrived in a Mexico ruled by terror, where revolutionary fervor was barely suppressed by French troops. When the United States, now clear of its own Civil War, aided the rebels in pushing back Maximilian’s imperial soldiers, the French army withdrew, abandoning the young couple. The regime fell apart. Maximilian was executed by a firing squad and Carlota, secluded in a Belgian castle, descended into madness.

Assiduously researched and vividly told, The Last Emperor of Mexico is a dramatic story of European hubris, imperialist aspirations clashing with revolutionary fervor, and the Old World breaking from the New.

EDWARD SHAWCROSS

is a historian and teacher who earned his PhD in history from the University College London. He lives in London.
When the 2020 Nobel Prize was awarded to the inventors of CRISPR, the revolutionary gene-editing tool, it underlined our amazing and apparently novel powers to alter nature. But as biologist Beth Shapiro argues in Life as We Made It, this phenomenon isn’t new. Humans have been reshaping the world around us for ages, from early dogs to modern bacteria modified to pump out insulin. Indeed, she claims, reshaping nature—resetting the course of evolution, ours and others’—is the essence of what our species does.

In exploring our evolutionary and cultural history, Shapiro finds a course for the future. If we have always been changing nature to help us survive and thrive, then we need to avoid naive arguments about how we might destroy it with our meddling, and instead ask how we can meddle better.

Brilliant and insightful, Life as We Made It is an essential book for the decades to come.

BETH SHAPIRO is a professor of evolutionary biology at the University of California, Santa Cruz. She is the author of How to Clone a Mammoth, which won the AAAS/Subaru Prize for Excellence in Science Books. She lives in Santa Cruz, California.
Johnny Cash was an American icon, known for his level, bass-baritone voice and somber demeanor, and for huge hits like “Ring of Fire” and “I Walk the Line.” But he was also the most prominent political artist in the United States, even if he wasn’t recognized for it in his own lifetime, or since his death in 2003.

Then and now, people have misread Cash’s politics, usually accepting the idea of him as a “walking contradiction.” Cash didn’t fit into easy political categories—liberal or conservative, Republican or Democrat, hawk or dove. Like most people, Cash’s politics were remarkably consistent in that they were based not on ideology or scripts but on emotion, instinct, and identification.

Drawing on untapped archives and new research on social movements and grassroots activism, Citizen Cash offers a major reassessment of a legendary figure.

Michael Stewart Foley is a historian of American politics and music and a professor of American civilization at the Université Grenoble Alpes. He is the author of three books, including Front Porch Politics and the award-winning Confronting the War Machine. He lives in Grenoble, France.
More than two thousand years ago, the Greek city-states, led by Athens and Sparta, laid the foundation for much of modern science, art, politics, and law. But the influence of the Greeks did not end with the rise and fall of this classical civilization. As historian Roderick Beaton illustrates, over three millennia Greek speakers produced a series of civilizations that were rooted in southeastern Europe but again and again ranged widely across the globe.

In *The Greeks*, Beaton traces this history from the Bronze Age Mycenaeans who built powerful fortresses at home and strong trade routes abroad, to the dramatic Eurasian conquests of Alexander the Great, to the pious Byzantines who sought to export Christianity worldwide, to today’s Greek diaspora, which flourishes on five continents. The product of decades of research, this is the story of the Greeks and their global impact told as never before.

**RODERICK BEATON** is a professor at King’s College London and commander of the Order of Honor of the Hellenic Republic. One of his recent books, *Greece: Biography of a Modern Nation*, was shortlisted for the Cundill History Prize. He is the three-time winner of the prestigious Runciman Award and lives in Kent, England.
Every medical decision—whether to have chemotherapy, an X-ray, or surgery—is a risk, no matter which way you choose. In You Bet Your Life, physician Paul A. Offit argues that, from the first blood transfusions four hundred years ago to the hunt for a COVID-19 vaccine, risk has been essential to the discovery of new treatments. More importantly, understanding the risks is crucial to whether, as a society or as individuals, we accept them.

Told in Offit’s vigorous and rigorous style, You Bet Your Life is an entertaining history of medicine. But it also lays bare the tortured relationships between intellectual breakthroughs, political realities, and human foibles. Our pandemic year has shown us, with its debates over lockdowns, masks, and vaccines, how easy it is to get everything wrong. You Bet Your Life is an essential read for getting the future a bit more right.

Paul A. Offit is the chief of the Division of Infectious Diseases and director of the Vaccine Education Center at the Children’s Hospital of Philadelphia, and a professor of vaccinology and pediatrics at the University of Pennsylvania School of Medicine. The author of nine books, he lives in Bala Cynwyd, Pennsylvania.
Medieval manuscripts can tell us much about power and art, knowledge and beauty. Many have survived because of an author’s status—part of the reason we have so much of Chaucer’s writing, for example, is because he was a London-based government official first and a poet second. Other works by the less influential have narrowly avoided ruin, like the book of illiterate Margery Kempe, found in a country house closet, the cover nibbled on by mice. Scholar Mary Wellesley recounts the amazing origins of these remarkable manuscripts, surfacing the important roles played by women and ordinary people—the grinders, binders, and scribes—in their creation and survival.

The Gilded Page is the story of the written word in the manuscript age. Rich and surprising, The Gilded Page shows how the most exquisite objects ever made by human hands came from unexpected places.

Mary Wellesley is a former research affiliate at the British Library, where she still teaches medieval language and literature. A frequent contributor to the London Review of Books, she completed her PhD at University College London. She lives in London.
Our species has amassed unprecedented knowledge of nature, which we have tried to use to seize control of life and bend the planet to our will. In *A Natural History of the Future*, biologist Rob Dunn argues that such efforts are futile. We may see ourselves as life’s overlords, but we are instead at its mercy. In the evolution of antibiotic resistance, the power of natural selection to create biodiversity, and even the surprising life of the London Underground, Dunn finds laws of life that no human activity can annul. When we create artificial islands of crops, dump toxic waste, or build communities, we provide new materials for old laws to shape. Life’s future flourishing is not in question. Ours is.

As ambitious as Edward Wilson’s *Sociobiology* and as timely as Elizabeth Kolbert’s *The Sixth Extinction*, *A Natural History of the Future* sets a new standard for understanding the diversity and destiny of life itself.

**ROB DUNN** is a professor in the department of applied ecology at North Carolina State University and in the Center for Evolutionary Hologenomics at the University of Copenhagen. He is also the author of five books. He lives in Raleigh, North Carolina.
JOE MOSHENSKA

MAKING DARKNESS LIGHT
A Life of John Milton

John Milton was once essential reading for visionaries and revolutionaries, from William Blake to Ben Franklin. Now, however, he has become a literary institution—intimidating rather than inspiring.

In Making Darkness Light, Oxford professor Joe Moshenska rediscovers a poet whose rich contradictions confound his monumental image. Immersing ourselves in the rhythms and textures of Milton’s world, we move from the music of his childhood home to his encounter with Galileo in Florence into his idiosyncratic belief system and his strange, electrifying imagination.

Making Darkness Light will change the way we think about Milton, the place of his writings in his life, and his life in history. It is also a book about Milton’s place in our times: about our relationship with the Western canon, about why and how we read, and about what happens when we let someone else’s ideas inflect our own.

JOE MOSHENSKA is professor of English at Oxford, where he teaches early modern literature. He is a BBC New Generation Thinker and his essays and reviews have appeared in the Times Literary Supplement, the White Review, the Financial Times, and the Observer. He received his PhD from Princeton and lives in Oxford, UK.

We are often told that hard work is the key to success. But success isn’t about hard work—it’s about shortcuts. Shortcuts allow us to solve one problem quickly so that we can tackle an even bigger one. They make us capable of doing great things. And, according to Marcus du Sautoy, math is the very art of the shortcut.

Thinking Better is a celebration of how math lets us do more with less. Du Sautoy explores how diagramming revolutionized therapy, why calculus is the greatest shortcut ever invented, whether you must really practice for ten thousand hours to become a concert violinist, and why shortcuts give us an advantage over even the most powerful AI. Throughout, we meet artists, scientists, and entrepreneurs who use mathematical shortcuts to change the world.

Delightful, illuminating, and above all practical, Thinking Better is for anyone who has wondered why you should waste time climbing the mountain when you could go around it much faster.

Marcus du Sautoy is the Simonyi professor for the public understanding of science and professor of mathematics at the University of Oxford. He is author of six books, including The Music of the Primes and The Great Unknown. Du Sautoy is a fellow of the Royal Society and recipient of the Faraday Prize. He lives in London.
In the mid-sixteenth century, Spanish explorers in the Chesapeake Bay kidnapped an Indian child and took him back to Spain and subsequently to Mexico. The boy converted to Catholicism and after nearly a decade was able to return to his land with a group of Jesuits to establish a mission. Shortly after arriving, he organized a war party that killed them.

In the years that followed, Opechancanough (as the English called him), helped establish the most powerful chiefdom in the mid-Atlantic region. When English settlers founded Virginia in 1607, he fought tirelessly to drive them away, leading to a series of wars that spanned the next forty years—the first Anglo-Indian wars in America—and came close to destroying the colony.

*A Brave and Cunning Prince* is the first book to chronicle the life of this remarkable chief, exploring his early experiences of European society and his long struggle to save his people from conquest.

**JAMES HORN** is the president of Jamestown Rediscovery. He is author and editor of eight books on colonial America, including *1619* and *A Land as God Made It*. He lives in Richmond, Virginia.
We like to define people by when they were born. A top expert explains why we shouldn’t.

BOBBY DUFFY
THE GENERATION MYTH
Why When You’re Born Matters Less Than You Think

Boomers are narcissists. Millennials are spoiled. Gen Zers are lazy. We assume people born around the same time have basically the same values. It makes for good headlines, but is it true?

Bobby Duffy has spent years studying generational distinctions. In The Generation Myth, he argues that our generational identities are not fixed but fluid, reforming throughout our lives. Based on an analysis of what over three million people really think about homeownership, sex, well-being, and more, Duffy offers a new model for understanding how generations form, how they shape societies, and why generational differences aren’t as sharp as we think.

The Generation Myth is a vital rejoinder to alarmist worries about generational warfare and social decline. The kids are all right, it turns out. Their parents are too.

BOBBY DUFFY is professor of public policy and director of the Policy Institute at King’s College London. Previously, he was director of global research at Ipsos MORI and the Ipsos Social Research Institute, and he is the author of Why We’re Wrong About Nearly Everything. He lives in London.
How do you solve a problem like James Madison? The fourth president is one of the most confounding figures in early American history; his political trajectory seems almost intentionally inconsistent. He was both for and against a strong federal government. He wrote about the dangers of political parties in the *Federalist Papers* and then helped to found the Republican Party just a few years later. This so-called Madison problem has occupied scholars for ages.

As Jay Cost shows in this incisive new biography, the underlying logic of Madison’s seemingly mixed record comes into focus only when we understand him primarily as a working politician. Whereas other founders split their time between politics and other vocations, Madison dedicated himself singularly to the work of politics and ultimately developed it into a distinctly American idiom. He was, in short, the first American politician.

**JAY COST** is a visiting scholar at the American Enterprise Institute and has written for the *Wall Street Journal*, *National Review*, and *Commentary*. He holds a PhD in political science from the University of Chicago. The author of *The Price of Greatness* and *A Republic No More*, he lives in western Pennsylvania.
Why understanding how ancient civilizations end can help us prepare for a potentially disastrous future

Pandemic, climate change, or war: our era is ripe with the odor of doomsday. In movies, books, and more, our imaginations run wild with visions of dreadful, abandoned cities and returning to the land in a desperate attempt at survival.

In The Next Apocalypse, archaeologist Chris Begley argues that we completely misunderstand how disaster works. Examining past collapses of civilizations, such as the Maya and Rome, he argues that these breakdowns are actually less about cataclysmic destruction than they are about long processes of change. In short: it’s what happens after the initial uproar that matters. Some people abandon their homes and neighbors; others band together to start anew. As we anticipate our own fate, Begley tells us that it was communities, not lone heroes, who survived past apocalypses—and who will survive the next.

Fusing archaeology, survivalism, and social criticism, The Next Apocalypse is an essential read for anxious times.

Chris Begley is an underwater archeologist, wilderness survival instructor, and a professor of anthropology at Transylvania University. He has worked and led groups through Central and South America and the Mediterranean. He lives in Lexington, Kentucky.
We’re constantly told that our planet is in crisis; that to save it, we must stop traveling, stop eating meat, even stop having children. But in *The Hydrogen Revolution*, Marco Alverà argues that we don’t need to upend our lives. We just need a new kind of fuel: hydrogen. From transportation and infrastructure to heating and electricity, hydrogen could eliminate fossil fuels, boost economic growth, and encourage global action on climate change. It could also solve the most bedeviling aspects of today’s renewable energy—from transporting and storing wind and solar energy and their vulnerability to weather changes to the inefficiency and limited utility of heavy, short-lasting batteries.

*The Hydrogen Revolution* isn’t just a manifesto for a powerful new technology. It’s a hopeful reminder that despite the gloomy headlines about the fate of our planet, there’s still an opportunity to turn things around.

**MARCO ALVERÀ** began his career working at Goldman Sachs in London before moving to Enel, the world’s largest renewable-energy company, and subsequently Eni, the oil and gas major. Since 2016, he has served as CEO of Snam, Europe’s largest gas pipeline company. He lives in Milan.
In recent years, we have gained unprecedented control over choices about our health. But these choices are hard and often full of psychological traps. As a result, we’re liable to misuse medication, fall for pseudoscientific cure-alls, and undergo needless procedures.

*In Your Life Depends on It*, Talya Miron-Shatz explores the preventable ways we make bad choices about everything from nutrition to medication, from pregnancy to end-of-life care. She reveals how the medical system can set us up for success or failure and maps a model for better doctor–patient relationships.

Full of new insights and actionable guidance, this book is the definitive guide to making good choices when you can’t afford to make a bad one.

**TALYA MIRON-SHATZ** is a leader in the intersection of psychology, medicine, and behavioral economics. She was a researcher at Princeton, taught at Wharton, and is a visiting researcher at the University of Cambridge. She lives in New York and Jerusalem.
We are storytelling animals. No other tool is as essential to human civilization as stories. Countless books celebrate their virtues. But in *The Story Paradox*, Jonathan Gottschall argues that there is a dark side to storytelling we can no longer ignore.

Stories tend to be divisive, and they are especially good at short-circuiting rational thought. Societies succeed or fail depending on how they manage these problems. And new technologies that amplify the effects of disinformation campaigns, cultural tribalism, conspiracy theories, and fake news have made separating fact from fiction nearly impossible.

With clarity and conviction, Gottschall reveals why our biggest asset is also our greatest threat, and what, if anything, can be done. It is a call to stop asking “How we can change the world through stories?” and start asking “How can we save the world from stories?”

**JONATHAN GOTTSCHALL** is a distinguished research fellow in the English department at Washington & Jefferson College and the author of *The Storytelling Animal*, a *New York Times* Editor’s Choice, and *The Professor in the Cage*, one of the *Boston Globe*’s Best Books of the Year. He lives in Washington, Pennsylvania.
Dozens of books promise to improve your brain function with a gimmick. Lifestyle changes, microdosing, electromagnetic stimulation: just one weird trick can lightly alter or dramatically deconstruct your brain.

In truth, there is no one-size-fits-all shortcut to the ideal mind. Instead, the way to understand cognitive enhancement is to think like a tailor: measure how you need your brain to change and then find a plan that suits it.

In *The Tailored Brain*, Emily Willingham explores the promises and limitations of well-known and emerging methods of brain customization, including prescription drugs, diets, and new research on the power of your “social brain.”

Packed with real-life examples and checklists that allow readers to better understand their cognitive needs, this is the definitive guide to a better brain.

Emily Willingham is a journalist and science writer. She is the author of *Phallacy: Life Lessons from the Animal Penis* and coauthor of *The Informed Parent: A Science-Based Resource for Your Child’s First Four Years*. Willingham is a regular contributor to *Scientific American*. She lives in Marin County, California.
Famed across the known world, built up over centuries, destroyed in a single day, ornamented with gold leaf and frescoes, or filled with beanbags and children’s drawings—the history of the library is rich, varied, and stuffed full of incident. In *The Library*, historians Andrew Pettegree and Arthur der Weduwen introduce us to the antiquarians and philanthropists who shaped the world’s great collections, trace the rise and fall of literary tastes, and reveal the high crimes and misdemeanors committed in pursuit of rare manuscripts. In doing so, they reveal that while collections themselves are fragile, often falling into ruin within a few decades, the idea of the library has been remarkably resilient as each generation makes—and remakes—the institution anew.

Beautifully written and deeply researched, *The Library* is essential reading for booklovers, collectors, and anyone who has ever gotten blissfully lost in the stacks.

**Andrew Pettegree** is professor of modern history at the University of St. Andrews and the award-winning author of several books on news and information culture. He lives in Scotland.

**Arthur der Weduwen** is a British Academy postdoctoral fellow at the University of St. Andrews. This is his fifth book. He lives in Scotland.

Seal Press was founded in 1976 and stands as one of the most enduring feminist publishing houses to emerge from the women’s press movement of the 1970s. What began as a letterpress in a Seattle garage has grown to an award-winning publishing house in New York and an imprint of Hachette, the third largest publisher in the world. Seal’s list is devoted to groundbreaking, boldly conceived books that inspire and challenge readers, lift up original voices, and imagine a better future. Publishing highlights include Ijeoma Oluo’s *So You Want to Talk About Race*, Julia Serano’s *Whipping Girl*, Michelle Tea’s *Valencia*, Minda Harts’s *The Memo*, and Susan Stryker’s *Transgender History*. 
When Nicole Stott first saw Earth from space, she realized how interconnected we are and knew she had to help protect our planetary home.

In *Back to Earth*, Stott imparts essential lessons in problem-solving, survival, and crisis response that each of us can practice to make change. She knows we can overcome differences to address global issues, because she saw this every day on the International Space Station. Stott shares stories from her spaceflight and insights from scientists, activists, and changemakers working to solve our greatest environmental challenges. She learns about the complexities of Earth’s biodiversity from NASA engineers working to enable life in space and from scientists protecting life on Earth for future generations. Ultimately, Stott reveals how we each have the power to respect our planetary home and one another by living our lives like crewmates, not passengers, on an inspiring shared mission.

**NICOLE STOTT** is a NASA astronaut who spent over one hundred days in space aboard the International Space Station. She founded the Space for Art Foundation, she speaks to audiences around the world including at the Vatican and the United Nations’ historic Paris Agreement gathering, and she’s featured in National Geographic’s *One Strange Rock*. She lives in Florida with her family.
An acclaimed expert illuminates the distinctive role that white women play in perpetuating racism, and how they can work to fight it.

Jessie Daniels

**Nice White Ladies**
*The Truth about White Supremacy, Our Role in It, and How We Can Help Dismantle It*

In a nation deeply divided by race, the "Karens" of the world are easy to villainize. But in *Nice White Ladies*, Jessie Daniels addresses the unintended complicity of even well-meaning white women. She reveals how their everyday choices harm communities of color. White mothers, still expected to be the primary parents, too often uncritically choose to send their kids to the "best" schools, collectively leading to a return to segregation. She addresses a feminism that pushes women of color aside, and a wellness industry that insulates white women in a bubble of their own privilege.

Daniels then charts a better path forward. She looks to the white women who fight neo-Nazis online and in the streets, and who challenge all-white spaces from workplaces to schools to neighborhoods. In the end, she shows how her fellow white women can work toward true equality for all.

Jessie Daniels is the author of *White Lies* and a professor of sociology, critical social psychology, and Africana studies at Hunter College and the CUNY Graduate Center. She also serves as faculty affiliate at Harvard University’s Berkman Klein Center. Her writing on race has appeared in the *New York Times*, NPR, and *Forbes*. She lives in New York City.
In workplaces nationwide, women of color need frank talk and honest advice on how to deal with microaggressions, heal from racialized trauma, and find relief from invisible workplace burdens. Filled with Minda Harts’s signature wit and warmth, *Right Within* offers strategies for women of color to speak up during racialized moments with managers and clients, work through past triggers they may not even know still cause pain, and reframe past career disappointments as opportunities to grow into a new path. Through action points, exercises, and clear-eyed coaching, Harts encourages women to summon hidden reserves of strength and courage. She includes advice from therapists and faith leaders of color on a full range of ways to heal. *Right Within* will help women of color strengthen their resolve across corporate America, ensuring that we can all, finally, rise together.

**MINDA HARTS** is the CEO of The Memo LLC, a career-development platform for women of color; a professor of public service at NYU; and the author of *The Memo*. She was named a LinkedIn Top Voice for Equity in the Workplace. She speaks at Fortune 500 companies and hosts the podcast *Secure the Seat*. She lives in New York City.
A searing exposé of the profound failures in our justice system, told by a woman who has journeyed from wrongfully accused prisoner to acclaimed public defender

**KEEDA HAYNES**

**BENDING THE ARC**

*My Journey from Prison to Politics*

Keeda Haynes was a Girl Scout and a churchgoer, but after college graduation, she was imprisoned for a crime she didn’t commit. Her boyfriend had asked her to sign for some packages—packages she did not know were filled with marijuana. As a young Black woman falsely accused, prosecuted, and ultimately imprisoned, Haynes suffered the abuses of our racist and sexist justice system. But rather than give in to despair, she decided to fight for change. After her release, she attended law school at night, became a public defender, and ultimately staged a highly publicized campaign for Congress. At every turn of her unlikely story, she gives unique insights into the inequities built into our institutions. In the end, despite the injustice she endured, she emerges convinced that ours can become a true second-chance culture.

Keeda Haynes is a criminal justice reform advocate and a former public defender. She works at Free Hearts, a nonprofit organization that supports formerly incarcerated women and the children of the incarcerated. In 2020, she ran for Congress to represent Tennessee’s Fifth District. She lives in Nashville, Tennessee.
FOR BROWN GIRLS WITH SHARP EDGES AND TENDER HEARTS
A Love Letter to Women of Color

For generations, Brown girls have had to push against powerful forces of sexism, racism, and classism, often feeling alone in the struggle. By founding Latina Rebels, Prisca Dorcas Mojica Rodríguez has created a community to help women fight together. In For Brown Girls with Sharp Edges and Tender Hearts, she offers wisdom and a liberating path forward for all women of color. She crafts powerful ways to address the challenges Brown girls face, from imposter syndrome to colorism. She empowers women to decolonize their worldview, and defy “universal” white narratives, by telling their own stories. Her book guides women of color toward a sense of pride and sisterhood and offers essential tools to energize a movement.

May it spark a fire within you.

Prisca Dorcas Mojica Rodríguez is a leading Latinx activist, writer, and speaker. She is the founder of Latina Rebels, a platform with over 250,000 followers. She has been featured on NPR, Teen Vogue, and Cosmopolitan. She lives in Nashville, Tennessee.
From the author of the smash hit #1 New York Times bestseller So You Want to Talk About Race, an “illuminating” (New York Times Book Review) history of white male identity in America

What happens to a country that tells generations of white men that they deserve power? What happens when their identity is defined by status over women and people of color? Through the last 150 years of American history, Ijeoma Oluo exposes the devastating consequences of white male supremacy. She then envisions a new white male identity, one free from racism and sexism. Now with a new preface addressing the harrowing 2021 Capitol attack, Mediocre confronts our founding myths, in hopes that we will write better stories for future generations.

“Searing . . . A sweeping cultural history of white men failing upward.” —San Francisco Chronicle

“Oluo is asking us to evaluate the myths America tells itself about itself, see the violence within . . . and then tell different stories. Truer ones.” —Washington Post

IJEOMA OLUO is the author of the #1 New York Times bestselling book So You Want to Talk About Race. She is a writer and speaker whose work on race has been featured in the New York Times and the Washington Post. She was named to the 2021 Time 100 Next list, has twice been named to The Root 100, and received the Harvard Humanist of the Year award. She lives in Seattle, Washington.
Revered as much for her fierce spirit as she is for her art, Frida Kahlo stands today as a feminist symbol of daring creativity. Her paintings have earned her admirers around the world, but perhaps her greatest work of art was her own life. What Would Frida Do? celebrates this icon’s signature style, outspoken politics, and boldness in love and art—even in the face of hardship and heartbreak. We see her tumultuous marriage with the famous muralist Diego Rivera and rumored flings with Leon Trotsky and Josephine Baker. In this irresistible read, writer Arianna Davis conjures Frida’s brave spirit, encouraging women to create fearlessly and stand by their own truths.

“This read will leave you feeling inspired.”
—Today Show

“Luminous.” — Esquire (A Best Book of the Year)

“Guaranteed to inspire even the most burnt out friend.” — InStyle

ARIANNA DAVIS is the senior director of editorial and strategy for O, The Oprah Magazine. Davis previously worked at Refinery29 and Us Weekly, and has written for New York, Glamour, and PopSugar Latina. She has also served as an entertainment and culture expert for Access Hollywood and TLC documentaries. She lives in New York City.
An updated edition of the laugh-out-loud guide to the first year of motherhood, filled with helpful advice and wisdom from real moms and dads who aren’t afraid to tell it like it is.

DAWN DAIS

THE SH!T NO ONE TELLS YOU (REVISED EDITION)

A Guide to Surviving Your Baby’s First Year

There comes a time in every new mother’s life when she realizes that all the pregnancy well-wishes and baby shower gifts left her profoundly unqualified for the realities of life with a newborn. Who knew there would be so much crying—and how much of that crying would be coming from the mom?

Bestselling author Dawn Dais believes that a vast conspiracy exists to hide the truth about parenting from expectant mothers for fear that if the truth got out, women would (1) stop having babies or (2) stop bringing them home. Eschewing the adorableness that oozes out of other parenting books, Dais offers real advice from real moms—along with hilarious anecdotes, tips, and the encouragement every new mom needs to survive the first year of parenthood.

Revised and updated with new chapters offering advice for single moms and tips for partners, The Sh!t No One Tells You is a must-have companion for every new mother’s sleepless nights and poop-filled days.

DAWN DAIS is the author of six other guides to pregnancy and parenting, including The Sh!t No One Tells You About Pregnancy and The Sh!t No One Tells You About Toddlers. She lives in Roseville, California.
